Overview

Let your users calculate tip right from their wrist! With this WatchKit app, your user no longer need to get their iPhone out of their pocket! In addition to calculate tip, it allows to split the bill among friends.

This is a **Universal App**, a single binary will run on iPhones, iPads and iPod Touches. Additionally, it also includes **WatchKit** App which will run on **Apple Watch**. The app is optimized for different screen sizes.

Features

- Universal App, single binary for iPhone, iPad and iPod Touch
- Includes WatchKit App
- Optimized for different screen sizes
- Easy to use interface for both Universal & WatchKit App
- Split bill feature
- Ready for App Store Submission. **A reskined version is already approved in App Store**
- Easy Resin

How To Reskin

Change Images

- The app doesn't contain any image resource (apart from app icon).

Change Fonts and Colors

- For Universal app, you can change fonts and colors of UI elements from storyboard. Select *TipCalculator/Main.storyboard* file and change fonts, colors etc.
- For WatchKit app, select the storyboard file from *TipCalculator WatchKit App/ Interface.storyboard* file and change fonts, colors etc.

Change Launch Screen & Launch Images

- If you want to change launch screen, then modify the *LaunchScreen.xib* file. This launch screen is used by devices running iOS 8 or greater.
- For iOS 7.1, there are launch images provided. From *TipCalculator/Images.xcassets*, select LaunchImage and you can see the current launch images. Just replace these launch images with your own launch images.

Change App Icon

- For universal app, select *TipCalculator/images.xcassets*, select AppIcon and you can see the current app icon in different sizes. Just replace the icons with your own version.
- For watchKit app, select *TipCalculator WatchKit App/Images.xcassets* and change icon in different sizes.
